

Brief Comments from Carl Swanson, K6CRS:

I can only assume that Mr. Leggett has his and his nation's best interests at heart, but lets address reality. If a nuclear event or other similar catastrophic anomaly leads to a wide scale EMP (electromagnetic pulse) AND I survive the nuclear blast, the last thing on my mind will be operating a radio. That's the military's job to be prepared for such contingencies.

If I want to utilize amateur radio after such an event, I'll just have to dust off my old Collins gear and make a wire antenna.

My point is that this Petition is superfluous. Don't make my electronic gear more expensive by imposing rules and standards that make no sense.

Carl Swanson, K6CRS
